REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

SAN FRANCISCO: 1952

COLORADO - MAY 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The weighted precipitation average was exactly normal, and the temperature departure only slightly above. Sunshine was also near seasonal except in the southeastern portion where more than the usual cloudiness prevailed, especially during the latter part of the month.

The month opened warm and dry with only scattered showers and thunderstorms until the 8th, during which period the monthly maximum temperature occurred at most stations. From the 9th to 11th, temperatures dropped below normal and more general precipitation occurred east of the Continental Divide. Following this period until mid-month, clear skies and warmer weather prevailed. On the 16th a pronounced temperature drop occurred and cooler weather prevailed until the 23rd, accompanied by the heaviest precipitation of the month in all sections of the State. At the close of the period, temperature fluctuated slightly above and below seasonal, with light widely scattered showers over the central and eastern portions of the State.

The monthly mean temperature, 53.8°, was 1.2° above normal, with the Kansas River drainage area showing a slight deficiency and the remainder of the State excesses. The monthly maximum temperature, 98°, occurred at Eversoll Ranch, Baca County, on the 4th, and the State minimum, 13°, at Lake Moraine, El Paso County, on the 18th. Precipitation averaged normal for the State. The Platte and Kansas Drainage areas showed precipitation excesses, while the remainder of the State was deficient. Hawthorne, with 6.86 inches, reported the greatest monthly precipitation, while the least, 0.20 inch, occurred at Fort Lewis. The greatest 24-hour amount, 2.30 inches, was recorded at Julesburg on the 15th.

Conditions were favorable for agricultural activities. Soil preparation and planting was completed early in the month, and most crops made very good showing, with the grain crop outlook one of the best in years. Pastures and ranges made marked improvement and at the close of the month were in near normal condition. Cattle and sheep, mostly on summer ranges, continued in good to excellent condition. Fruits set-on well and thinning of peaches and apricots and spraying of apples and pears were general as the period closed. The irrigation and storage water supply outlook was good in most sections.

SEVERE STORMS: In the vicinity of Idalia on the 7th, a moderate hailstorm caused $1,000 damage to property and $5,000 to crops. On the 8th, a severe twister or tornado 12 miles northeast of Stratton destroyed a large barn, other farm buildings, and farm machinery. Several cows, calves, hogs, and chickens were killed and one person slightly injured. A moderate tornado, accompanied by light hail, near Kersey occurred about 2:04 p.m. on the 15th, moving in a circular counterclockwise direction and disappearing to the southwest. Damage was limited to small farm buildings. Some poultry were killed and four persons slightly injured. In Washington and Yuma Counties, a severe hailstorm caused $100,000 damage to crops on the 31st.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

SAN FRANCISCO: 1952

COLORADO - JUNE 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

This month was the warmest June of record, with a weighted mean temperature of 66.3°, 4.8° above normal. The highest reading, 112°, equalled the all-time record previously recorded in the years 1889 and 1936. Precipitation was unusually light with lesser amounts occurring only six times in June during the past 65 years of record.

Excess temperature departures prevailed throughout the month with the exceptions of very slight deficiencies in the Colorado Valley on the 3rd, again near mid-month, and over the northern and western areas from the 25th to the 28th. Periods of precipitation were limited to light showers and thunderstorms for a few days at the beginning of the month, again from the 18th to the 20th, and more general rains with several destructive storms during the middle of the third decade.

The monthly mean temperature, 66.3°, was 4.8° above normal. The extreme high of 112° occurred at Burlington on the 15th, and a minimum of 21° was observed at Kremmling on the 18th. Precipitation averaged only 0.61 inch, or 0.84 inch below the weighted average. The greatest monthly amount, 2.46 inches, occurred at Vallecito Dam, La Plata County, and Fort Collins; while 17 stations were entirely without moisture. The greatest 24-hour amount of precipitation was 1.96 inches, also at the Vallecito Dam station.

Conditions were only fair for farming activities. After a good showing during the previous months, vegetation dried and burned rapidly from the record high temperatures and lack of moisture. By the close of the month, many crops, ranges, and pastures had suffered severely from the elements. Grains ripened rapidly and harvest of winter wheat and barley was general over the eastern plains at the close of the period. The yield outlook was considerably reduced by premature ripening. Corn, sugar beets, potatoes and other row crops progressed rapidly and the crop outlook was generally good except in some of the drier sections. Thinning of sugar beets was completed and cultivating and irrigation were general. Cutting of a fair to good first crop of alfalfa was completed by mid-month. The second alfalfa crop, however, was slow due to deficient moisture. Ranges and pastures deteriorated rapidly.

SEVERE STORMS: On the 6th at Indian Hills, 15 miles southwest of Denver, lightning killed one man and injured two boys during a severe thunderstorm. Near Woodrow, in extreme northwestern Washington County, on the 26th, a twister of considerable intensity, accompanied by heavy hail, swept an area of approximately 14 square miles. Damage, mostly to crops, exceeded $100,000. From 3:15 p.m. to 10:00 p.m. on the 26th, destructive winds, dust, rain and hailstorms prevailed over scattered sections of an area of approximately 5,000 square miles, extending from eastern Larimer County to western Yuma County. The greatest damage was from hail to standing grains; although hay, corn, other row crops and fruits also suffered severely from the storm. The total damage exceeded $2,000,000.

WMW

STORAGE GAGE DATA WILL BE PUBLISHED HEREAFTER IN THE JULY OR AUGUST ISSUES OR AS DELAYED DATA IN THE DECEMBER ISSUE.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Tables 3,6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

JANUARY 1951	Fort Lupton, precipitation total should be .71.
FEBRUARY 1951	Green Mt. Dam, precipitation departure should be -.12.
MARCH 1951	Platoro Dam, lowest temperature should be -27° on 29th.
	Telluride, precipitation departure should be -1.66.
JULY 1951	Silverton 2 NE, total degree days should be 260.
AUGUST 1951	Haswell, precipitation departure should be -.91.
OCTOBER 1951	Monte Vista, precipitation departure should be .02.
	Montrose 2, precipitation departure should be -.26.
	Walsenburg, temperature departure should be -3.7° and precipitation departure, -.39.
NOVEMBER 1951	Glenwood Springs 1 N, precipitation departure should be -.57.
DECEMBER 1951	Akron CAA AP, precipitation departure should be .09.
	Weather Summary, the paragraph headed "SEVERE STORMS", the first sentence should read "southwestern".
ANNUAL 1951	Blanca, May, precipitation departure should be -.57.
	Fort Lupton, January precipitation should be .71.
	Seibert 14 S, delete annual precipitation total.
	Shoshone, annual precipitation departure should be 7.01.

CLIMATOLOGICAL DATA

COLORADO

JULY 1952
Volume LVII No. 7

SAN FRANCISCO: 1952

COLORADO - JULY 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

For the State, the month was moderately warmer than usual with about two-thirds of the seasonal precipitation. Cloudiness was generally less than usual, resulting in sunshine in some sections being somewhat above normal. Conditions were favorable for harvesting and other outdoor activities, but too dry, warm, and windy for normal growth and maturing of most crops. There were but few damaging storms.

The month opened warm for the first few days, changing to cooler with widely scattered showers and thunderstorms until the 9th, during which period, the monthly minima were recorded in most sections. Near mid-month, temperatures fluctuated somewhat with continued widely scattered precipitation. From the 17th to the 27th, the trend was to warmer weather and more general rains with the monthly maximum temperatures occurring on the 21st, 22nd, and 23rd at most stations. Temperatures were somewhat lower at the close of the period. The monthly mean temperature, 68.2°, was 0.8° above normal, with all sections showing excesses. The highest temperature, 108°, occurred at Holly on the 22nd, and the lowest, 25°, at Platoro Dam on the 16th and at Fraser on the 8th. Precipitation averaged 1.35 inches, or 0.67 inch below normal and was deficient in all sections. The greatest monthly amount, 4.94 inches, occurred at Independence Pass, and the least, 0.02 inch, at Eads. The greatest precipitation in 24 hours was 2.19 inches at Walden on the 28th.

Conditions generally were poor to good for farming activities. Current and previous periods of high temperatures, strong winds, and deficient moisture were detrimental to crop growth and many areas suffered severely. Combining and threshing of winter grains were nearing completion at the close of the month with fair to good yields. Spring grains were ripening and harvesting of the more advanced fields had begun. Row crops made good progress in the irrigated areas with the sugar beet crop the most outstanding. In the non-irrigated sections, crops suffered severely from near drouth conditions. Alfalfa, other forage, pastures, and ranges were good in the higher elevations, but made a poor showing in the lower dry farming areas. Livestock continued in good to excellent condition, although evacuating of many herds from the drier areas was under way. Picking of apricots, cherries, and early apples was general with a fair to good yield.

SEVERE STORMS: Fresh to strong winds, accompanied by rain and heavy hail, swept an 8-square mile area adjoining and west of Mancos on the 28th. Hailstones averaged one inch in diameter and the damage, mostly to crops, exceeded $5,000.

WMW

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry
+	And also on a later date or dates
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

AUGUST 1952
Volume LVII   No. 8

SAN FRANCISCO: 1952

COLORADO - AUGUST 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was warm, wet, and with an unusual number of rainy days, and quite frequent moderately heavy hail, rain, and windstorms. It was the fifth consecutive month with abnormal temperature.

Day to day temperature fluctuations and departures were moderate with the greatest excesses occurring during mid-month, and the more pronounced deficiencies at the beginning of the second decade and near the close of the period. Heavy showers occurred in the northeastern portion on the 3rd and 4th, with moderate winds and hail over the Denver and Colorado Springs areas. From the 6th to the 14th, showers and thunderstorms were general over the greater portion of the State. From the 18th to the close of the month, precipitation was again general with severe thunderstorms, heavy hail, and strong winds over several areas, resulting in the death by lightning of one person near Yampa.

The average monthly temperature, 67.1°, was 1.2° above normal. The highest station mean of 80.2° occurred at Eversoll Ranch, in Baca County, and the lowest, 50.0°, at Tennessee Pass. The Eversoll Ranch station also showed the monthly maximum of 105° on the 16th, while the minimum of 24° was registered at Fraser on the 31st.

Precipitation averaged 2.19 inches with an excess of 0.29 inch. Cimarron 3 SE recorded the greatest monthly amount, 7.69 inches, while the least, 0.24 inch, occurred at Doherty Ranch, in Las Animas County. The greatest rainfall in any 24 consecutive hours was 3.77 inches at Haswell.

The increase in moisture was beneficial to crops, ranges, and pastures, although in the southern plains it came too late to give material aid. Combining and threshing of winter grains were completed early in the month, and by its close, harvesting of spring grains was well advanced. The over-all grain crop yield was fair to good. Row crops and garden truck made average progress, especially corn and sugar beets, and the crop outlook for the latter was the best in years. Pastures and ranges were adequate in the northern and mountain regions, but dry and burned rapidly in many southern counties. Condition of livestock ranged from good to excellent with many herds being evacuated to greener ranges from the near-drouth areas.

SEVERE STORMS

On the 3rd, wind and hail caused slight damage at Falcon and resulted in moderate losses to crops in the Englewood district. On the 13th, lightning destroyed a building on Lookout Mountain. On the 19th and 21st, in Delta County, heavy rains and local floods resulted in damage to roads, irrigation canals, and farm buildings, to the extent of over $45,000. At Greenland Ranch on the 23rd, hail and heavy rain caused moderate damage to property and crops. One person was killed near Yampa by lightning on the 29th.

WMW

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

SEPTEMBER 1952
Volume LVII No. 9

SAN FRANCISCO: 1952

COLORADO - SEPTEMBER 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Mild temperatures, deficient moisture, abnormal sunshine, and no severe storms characterized the month's weather. It was the sixth consecutive month with abnormal temperatures.

September opened clear and cool until the 3rd, when temperatures gradually rose until the 12th, with light scattered precipitation over the north and west portions. As a rule, monthly maximum temperatures occurred during this period. From the 13th to the 23rd, temperatures fluctuated somewhat, with some light to moderate showers and snow flurries over most of the section. The remainder of the month was warm and dry. Monthly minimum temperatures were most common at the beginning of the third decade.

The average monthly temperature, 60.3°, was 1.9° above normal. The highest station mean of 72.3° occurred at Palisade 1 S, and the lowest, 44.2°, at Climax 2 NW. Fort Lupton showed the monthly maximum of 103° on the 4th, while the monthly low of 14° was recorded at Fraser on the 22nd.

Precipitation, deficient in all sections except the Rio Grande River Drainage, averaged 0.89 inch, a deficiency of 0.50 inch. Cimarron 3 SE recorded the greatest monthly amount, 4.70 inches, while only a trace occurred at the Spicer 2 NE station. The greatest amount of precipitation in any 24-hour period was 3.60 inches at Cimarron 3 SE on the 21st.

Conditions were favorable for harvesting and farming activities in general. Crops and ranges suffered from shortage of moisture, especially in the southern sections. Soil preparation and planting of fall grains were general, with many fields showing by the close of the month.

Cattle and sheep were in good to excellent condition with most herds in feed lots or moving to winter ranges.

Picking of an excellent peach crop was completed early in the month, with the harvest of pears and apples continuing throughout the period.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

OCTOBER 1952
Volume LVII No. 10

See note concerning, "Hourly Precipitation Data" on page 129 of this issue.

SAN FRANCISCO: 1952

COLORADO - OCTOBER 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was warm and mild and the driest October of record, with no severe or damaging storms.

October opened clear and mild until the 4th with the monthly maxima generally occurring during this period. Lower temperatures prevailed until the 8th with light precipitation over the northern plains. Near midmonth, temperatures dropped over the entire State, with the monthly minima occurring at most stations on the 15th. The remainder of the month was clear and warm and without moisture except for a few isolated showers or snow flurries.

The monthly mean temperature, 49.4°, was 1.9° above normal, with all sections except the Kansas Drainage Basin showing excesses. The highest monthly mean, 61.7°, was at the Palisade 1 S station, and the lowest, 35.5°, at Fraser. The monthly maximum temperature, 93°, was observed at Eversoll Ranch, in Baca County, on the 3rd, and the monthly low of -5° at Fraser on the 15th. Precipitation averaged 0.05 inch, showing a deficiency of 1.18 inches, the driest October of record. The greatest monthly amount, 0.54 inch, occurred at Winter Park, and 89 stations were entirely without moisture. The greatest 24-hour amount, 0.45 inch, was measured at Julesburg on the 14th.

Conditions were very favorable for outdoor activities and most crops were harvested without losses from weather conditions. Digging of sugar beets and picking of corn and late apples were nearing completion at the close of the month. Winter grains suffered severely from the continued drouth and many fields will be abandoned or reseeded. Pastures and ranges also were very dry. Livestock was in good to excellent condition with most herds in feed lots.

AVERAGES FOR THE PERIOD FEBRUARY 1951 TO DATE HAVE BEEN WEIGHTED ACCORDING TO AREA AND ARE NOT COMPARABLE WITH UNWEIGHTED VALUES PUBLISHED IN THIS TABLE FOR EARLIER YEARS.

ANNOUNCING THE RESUMPTION OF PUBLICATION OF HOURLY PRECIPITATION DATA

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

NOVEMBER 1952
Volume LVII No. 11

See note concerning, "Hourly Precipitation Data" on page 143 of this issue.

SAN FRANCISCO: 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

An unusually prolonged cold period during the last decade, resulting in a low average temperature which was exceeded only by November 1929, characterized the month's weather.

From the 1st to the 10th, temperatures fluctuated considerably and light, widely scattered snow flurries occurred at the beginning and again at the close of the period over most of the State. For the following five days, clear skies and abnormal temperatures prevailed. From the 16th to the 19th, temperatures dropped to near or somewhat below normal with moderate precipitation over all sections. During the last decade, temperature departures ranged from 10° to 30° below seasonal, and this was the most extended cold period for any November of record. Precipitation was also general from the 21st to the 25th. Monthly maxima were most common on the 1st, and minima generally occurred on the 27th.

The weighted monthly mean temperature, 30.0°, was 4.9° below the normal and the second coldest November of record, with all sections showing deficiencies. The highest monthly mean, 39.9°,occurred at Palisade 1 S, and the lowest, 17.2°, at Climax 2 NW. The highest temperature, 80°, was recorded at Las Animas and Holly on the 1st, and the lowest, -32°, was reported from the Wagon Wheel Gap 3 N station on the 27th. The weighted average precipitation, 1.07 inches, exceeded the normal by 0.24 inch, with all sections showing excess departures. The greatest monthly amount, 7.99 inches, occurred at Wolf Creek Pass 4 W, and the least, 0.11 inch, at Rangely. The maximum amount in any 24-hour period was 2.05 inches at Wolf Creek Pass 4 W.

Harvesting of an excellent sugar beet and other late crops was completed early in the month without losses due to inclement weather conditions. Soil preparation was limited because of dryness. Winter grains were only fair to good at the close of the month due to previous dry periods and soil erosion. Cattle, sheep, and other livestock generally were in good condition with most herds in feed lots.

AVERAGES FOR THE PERIOD FEBRUARY 1951 TO DATE HAVE BEEN WEIGHTED ACCORDING TO AREA AND ARE NOT COMPARABLE WITH UNWEIGHTED VALUES PUBLISHED IN THIS TABLE FOR EARLIER YEARS.

ANNOUNCING THE RESUMPTION OF PUBLICATION OF HOURLY PRECIPITATION DATA

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

SAN FRANCISCO: 1953

COLORADO - DECEMBER 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Subnormal temperatures, a precipitation deficiency, and no severe or damaging storms featured the month's weather.

The month opened cool and cloudy with light scattered snows over the higher elevations and western slope, while somewhat above seasonal temperatures and generally clear skies prevailed over the plains area until the 10th. From the 11th to the 16th, abnormal temperatures predominated over the entire State, with moderate precipitation east of the Continental Divide. During this period, monthly maximum temperatures occurred at most stations. The third decade opened stormy and cold, with the heaviest snowfall of the month occurring from the 21st to the 24th. The monthly minimum temperatures generally were recorded on the 24th or 25th. Temperatures rose considerably at the close of the period with light, well-distributed moisture on the 31st.

The monthly mean temperature, 24.3°, was 1.7° below normal, with all sections showing deficiencies. The highest monthly mean, 37.6°, occurred at Canon City, and the lowest, 6.5°, at Taylor Park. The temperature extremes, 70° and -37°, were recorded at Eversoll Ranch on the 15th, and at Walden on the 25th, respectively. The weighted average precipitation, 0.57 inch, showed a minus departure of 0.37 inch, with only the Kansas River Basin showing an excess. The greatest monthly amount, 2.97 inches, occurred at Wolf Creek Pass 4 W, and none was observed at Genoa. The greatest amount in any 24-hour period was 1.05 inches at Wray on the 13th.

Conditions were favorable for farming and other outdoor activities. Plowing and preparation of soil continued in some sections and pruning of fruit trees was general. Winter grains were mostly dormant with some reports of damage by blowing soil. Ranges and pastures remained dry or snow covered. Highways and roads were in good condition, and most mountain passes were open throughout the month.

AVERAGES FOR THE PERIOD FEBRUARY 1951 TO DATE HAVE BEEN WEIGHTED ACCORDING TO AREA AND ARE NOT COMPARABLE WITH UNWEIGHTED VALUES PUBLISHED IN THIS TABLE FOR EARLIER YEARS.

ANNOUNCING THE RESUMPTION OF PUBLICATION OF HOURLY PRECIPITATION DATA

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

FEBRUARY 1952	Grand Junction WB AP, temperature departure should be -1.5°.
MAY 1952	Cochetopa Creek, max. temperature on 1st should be 58°, mean max. 64.4° and mean 47.7°.
	Meeker, max. temperature on 5th should be 78°; 10th, 62°; 26th, 67°; mean max. 68.9°, mean 52.5°, departure 1.0°, highest 79° on 3rd and total degree days 383.
JUNE 1952	De Beque, evaporation on 6th should be no record, amount on 30th,.80 and monthly total B11.09. Wind movement on 30th should be 90 and monthly total 1335.
	Tennessee Pass, max. temperature on 22nd should be on 21st, min. temperature on 28th, 21°, mean min. 31.0°, mean 49.5° and total degree days 458.

ANNUAL SUMMARY 1952

Volume LVII No. 13

CHATTANOOGA: 1953

COLORADO - ANNUAL - 1952

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

The year was slightly warmer than usual with a mean temperature of 45.5°, or 0.2° above normal. Deficiencies occurred in February, March, November, and December, with outstanding minus departures in March and November. Monthly excesses obtained during the remainder of the year with June showing the greatest plus departure for the entire period of record. Precipitation was somewhat above average in January, March, August, and November. April and May were exactly normal, and the remaining months showed deficiencies, with October the driest of record. The total annual precipitation, 13.30 inches, was 3.24 inches below normal. The greatest monthly amount, 11.21 inches, occurred at Wolf Creek Pass 4 W in January, and the greatest 24-hour value, 3.77 inches, at Haswell on August 29. Maximum temperatures of 100° or above occurred during June to September, with a seasonal high of 112° at Burlington on June 15. Sub-zero temperatures were recorded January through April, and October through December, with an annual low of -43° at Walden on January 3. The unusually low average temperature in March and November, the record high temperatures in June, and the precipitation deficiency in October were the outstanding climatic features of the year 1952.

SYNOPSIS BY MONTHS

JANUARY: The month was warmer and wetter than the average January, and without severe or damaging storms. All sections except the Colorado River Basin, showed temperature excesses. Precipitation was well-distributed throughout the month, while moderate excesses occurred in the Colorado and Rio Grande drainage areas, with similar deficiencies elsewhere in the State. Winter grains generally were dormant, but suffered somewhat from soil erosion in the southeastern counties. Livestock wintered well, with only isolated cases of shrinkage and losses due to late December snows.

FEBRUARY: Slightly colder and considerably drier conditions prevailed. Somewhat abnormal winds caused drifting snow throughout the State and soil movement in the southeast. Winter grains suffered somewhat from dryness and blowing soil, especially in the lower Arkansas River Basin. Ranges remained dry or snow covered. Livestock continued in good to very good condition, with calving and lambing well under way at the close of the month. The storage and irrigation water outlook continued very good as a result of heavy snows during previous months.

MARCH: March was cold, windy, and wet. Temperature deficiencies obtained in all sections, with an average minus departure of near 5°. The month was the seventh coldest March of record. Precipitation averaged somewhat above normal and was well-distributed throughout the month. On the 12th, west and northwest winds of fresh to gale force prevailed over a 200-mile strip east of the Continental Divide, accompanied by severe soil movement in the southern portion. Moderate to light property damage occurred in the northern section, while more severe losses resulted elsewhere, especially in the metropolitan areas of Colorado Springs and Pueblo. Over some sections, visibility was reduced to zero by blowing soil. Heavy snows and strong winds occurred east and along the Continental Divide on the 21st and 22nd, extending from Wyoming to New Mexico. Transportation was slowed and some country schools closed. By the close of the month, planting of spring grains, row crops, and early garden truck was under way. Ranges and pastures improved somewhat but were still in only fair condition. Livestock was in good to very good condition; calving and lambing were well advanced, with good increases. Sheep shearing got under way in most sections.

APRIL: Seasonal weather prevailed through April, with normal precipitation and temperatures only slightly above. On the 3rd in the Haswell area, soil-laden winds, reaching gale force at times, prevailed for a period of 10 hours. The resulting damage was limited to winter grains and newly plowed fields. The month was favorable for farming and other outdoor activities. Soil preparation and planting advanced at a normal rate. Winter wheat and barley made satisfactory progress, and the crop outlook was good, especially in the Platte and Kansas River Basins. The fruit crop outlook was good with buds in various stages from swelling to full bloom.

MAY: Precipitation averaged exactly normal for May, and temperatures were only slightly above. Sunshine was also near normal except in the southeastern portion where considerable cloudiness prevailed, especially during the latter part of the month. In the vicinity of Idalia on the 7th, a moderate hailstorm caused limited damage to crops and property. On the 8th, a severe twister 12 miles northeast of Stratton destroyed a number of farm buildings and killed some livestock. A moderate tornado, accompanied by light hail near Kersey, occurred on the 15th. Damage was limited to small farm buildings and four persons were slightly injured. In Washington and Yuma Counties, a severe hailstorm resulted in $100,000 damage to crops on the 31st. Soil preparation and planting was mostly completed early in the month and crops made a very good showing. Pastures and ranges showed marked improvement. Cattle and sheep were mostly on summer ranges and in very good condition. Fruits set on well, and thinning of peaches and apricots and spraying of apples and pears were general at the close of the period.

JUNE: This month was the warmest June of record with a mean temperature of 4.8° above normal. The highest temperature, 112°, equaled the all-time record. Precipitation was unusually light with lesser amounts occurring only six previous times in June during the entire period of record. On the 6th at Indian Hills, lightning killed one man and injured two boys. Near Woodrow on the 26th, a twister of considerable intensity, accompanied by heavy hail, swept an area of approximately 14 square miles, damaging crops to the extent of $100,000. On the afternoon of the 26th, a destructive wind, dust, rain, and hailstorm prevailed over scattered sections of an area of approximately 5,000 square miles, extending from eastern Larimer to western Yuma Counties. Damage was mostly to crops, especially standing grains, and losses exceeded $2,000,000. Conditions were only fair for farming activities. Vegetation dried and burned rapidly from record high temperatures and lack of moisture. By the close of the month, many fields and ranges had suffered severely from the elements. Winter grains ripened rapidly and harvesting was general over the eastern plains. The row crop outlook was generally good in the irrigated areas, but only poor to fair in the dry farming sections. Thinning and cultivating of sugar beets and cutting of the first alfalfa crop was completed by mid-month.

JULY: The month was moderately warmer than usual with about two-thirds of the normal precipitation. Except for a moderate wind, rain, and hailstorm near Mancos on the 26th, July was without severe or damaging storms. Current and previous periods of high temperatures, strong winds, and deficient moisture were detrimental to crop growth and many areas suffered severely. Harvesting of winter wheat and barley continued and spring grains were ripening. Row crops made good progress in the irrigated sections with the sugar beet crop the most outstanding. Livestock continued in good to excellent condition, although evacuation of many herds from the drier areas was necessary. Picking of early fruits got under way with a fair to good yield.

AUGUST: Warm, wet weather, with an unusual number of rainy days and frequent moderately heavy hail, rain, and windstorms featured the month. It was the fifth consecutive month with abnormal temperatures. On the 3rd, wind and hail caused slight damage at Falcon, and somewhat greater losses to crops in the Englewood district. On the 13th, lightning destroyed a building on Lookout Mountain. On the 19th and 21st in Delta County, heavy rains and floods damaged roads, canals, and buildings to the extent of $45,000. Hail and rain caused moderate damage to crops at Greenland on the 22nd. One person was killed near Yampa by lightning on the 19th. The increase in moisture was somewhat beneficial to vegetation, but came too late for material aid. Harvesting of grains was general throughout the month. Row crops made good progress, especially corn and sugar beets. Pastures and ranges were adequate in the north portion and higher elevations, but dry and burning elsewhere.

SEPTEMBER: Mild temperatures, deficient moisture, abnormal sunshine, and no severe storms characterized the month's weather. It was the sixth consecutive month with abnormal temperatures. Weather was favorable for harvesting and general farming activities. Crops and ranges suffered from deficient moisture. Soil preparation and planting of winter grain was general with many fields showing by the close of the month. Picking of an excellent peach crop was completed early in the month with the harvest of pears and apples continuing.

OCTOBER: The driest October of record, moderately high temperatures, and no severe or damaging storms featured this month's weather. Farming and outdoor activities were normal and most crops were harvested without losses. Digging of sugar beets and picking of corn and late apples were nearing completion. Winter grains suffered severely from the continued drouth and many fields will be abandoned or re-

(Continued on Page 176.)

WEATHER SUMMARY (Continued)

seeded. Livestock was in good to excellent condition with most herds in feed lots.

NOVEMBER: The month's weather was characterized by the most extended cold period of record during the third decade, resulting in a low average temperature which was exceeded only by November 1929. Harvesting of an excellent sugar beet crop was completed early in the month without losses due to inclement weather. Soil preparation was limited because of dryness. There was little or no improvement of winter grains. Cattle, sheep, and other livestock generally were in good condition with most herds in feed lots.

DECEMBER: This month was somewhat colder than the usual December with a considerable precipitation deficiency and no severe storms. Temperature fluctuations were moderate and moisture was well-distributed throughout the month. Plowing and preparation of soil continued in some sections and pruning of fruit trees was general. Winter grains were dormant with some reports of damage by blowing soil. Ranges remained dry or snow covered. Highways and roads were in good condition and most mountain passes remained open throughout the month.

WMW

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Date for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

-	No record.
+	Also later date (dates) or months.
*	Amount included in following measurement.
//	Gage is equipped with a windshield.
B	Adjusted to full month.
E	Amount is wholly or partially estimated.
M	Less than a complete month of record available; if average value is entered, less than 10 days of record are missing. See monthly Climatological Data for detailed daily record.
R	Data from recording gage.
T	Trace, an amount too small to measure.
V	Includes total for previous months. V in annual column means total is for a two-year period.
S	Storage precipitation station. Data will be published in the July or August or delayed data December issue of Climatological Data.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

JANUARY 1953
Volume LVIII No. 1

SAN FRANCISCO: 1953

COLORADO - JANUARY 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Record-breaking temperatures with a mean 8.4° above normal characterized the month's weather. Wind movement was also abnormal, ranging from 20 to 60 per cent above the seasonal average. Precipitation was light in all sections with a deficiency for the State of 0.29 inch.

The month opened unsettled and cool with general light precipitation until the 8th. From the 9th to the 13th, fair weather and rapidly rising temperatures prevailed with the monthly maxima at most stations occurring on the 11th or 12th. From the 14th to the 16th, the heaviest precipitation and coldest weather was experienced with the monthly minima generally occurring during this period. The remainder of the month was mild with widely scattered light moisture. The 25th and 26th were unusually warm with monthly maxima at some stations occurring on these dates. Although wind movement was considerably above seasonal, no severe or damaging storms occurred. The monthly mean temperature, 31.7°, was 8.4° above normal. The highest monthly mean, 45.3°, occurred at Canon City, and the lowest, 14.3°, at Taylor Park. The extremes were 78° at Arriba on the 12th, and -38° at Taylor Park on the 16th. The weighted monthly precipitation, 0.64 inch, was 0.29 inch below normal. The greatest monthly amount, 4.08 inches, occurred at Steamboat Springs, and five stations were entirely without moisture. The greatest precipitation in any 24-hour period was 1.79 inches at Dolores on the 14th.

Winter grains continued to suffer from moisture deficiency and soil drifting winds. Ranges and pastures remained dry, but hay and feed were plentiful. Livestock was in very good condition throughout the month with heavy movement to market. Reports on highways and roads generally were good with occasional periods of icy conditions in the higher elevations. Sub-soil moisture and snow on the ground were both deficient at the close of the month.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

FEBRUARY 1953
Volume LVIII No. 2

SAN FRANCISCO: 1953

COLORADO - FEBRUARY 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

February was noticeably dry and windy with temperatures averaging slightly above normal. All sections showed temperature excesses except the Colorado Drainage Basin. Section 4, the Platte Drainage Basin, showed a slight moisture excess, while deficiencies occurred elsewhere, with the greatest minus departure in the Colorado Drainage Basin. The most outstanding features of the month were blizzard conditions on the 9th, 19th, 20th, and strong winds on the 15th, being most severe over the northeast portion.

From the 1st to the 8th, temperatures were considerably above normal with the monthly maxima at practically all stations occurring early in this period. Following for a period of 10 days, temperatures fluctuated considerably with widely scattered precipitation which began in most sections on the 4th and continued until the 15th. Temperatures dropped rapidly on the 19th, and the heaviest snow of the month occurred on this date. Low temperatures continued until the 25th with the monthly minima most prevalent on the 21st. The month closed clear and warm. The monthly mean temperature, 27.7°, was 0.4° above normal. The monthly maximum, 78°, occurred at John Martin Dam on the 28th, and the minimum, -43°, at Taylor Park on the 21st. Precipitation was only 50 percent of the normal with a weighted average of 0.51 inch. Sugar Loaf Reservoir reported 2.20 inches, the greatest monthly precipitation, while no moisture fell at the Fountain 9 NE station. The greatest 24-hour amount, 1.01 inches, was recorded at the Denver WB Airport station.

Winter grains continued to suffer from dryness and blowing soil, especially in the east-central and southeast portions. Livestock wintered well. Pastures and ranges were dry or snow covered, but hay and other feeds were plentiful. Except for short periods, roads and highways were in good condition and most mountain passes were open throughout the month. The storage and irrigation water supply outlook was only fair at the close of the period.

SEVERE STORMS

Over northeastern Colorado, moderate snow, some sleet, and strong winds on the 9th damaged transmission lines and slowed transportation. Losses generally were limited to the extreme northeast counties. On the 15th, high winds prevailed from early morning to near midnight over most of the northeast and east-central portions, damaging transmission lines, large signs, windows, trees, and small structures. Blowing snow and soil reduced visibility to near zero over some sections and damaged winter grains. Fresh to strong winds, reaching gale force at some points, with light to heavy snows, occurred over most of the State on the 19th and 20th, with the more severe conditions prevailing over the northeast portion. Drifting snows caused the greater damage. Roads were blocked temporarily, motorists marooned, country schools closed, and visibility reduced to zero over many locations. Transmission lines, signs, trees, small buildings, and winter grains suffered from the elements. Some livestock losses were reported, and shrinkage was noticeable.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

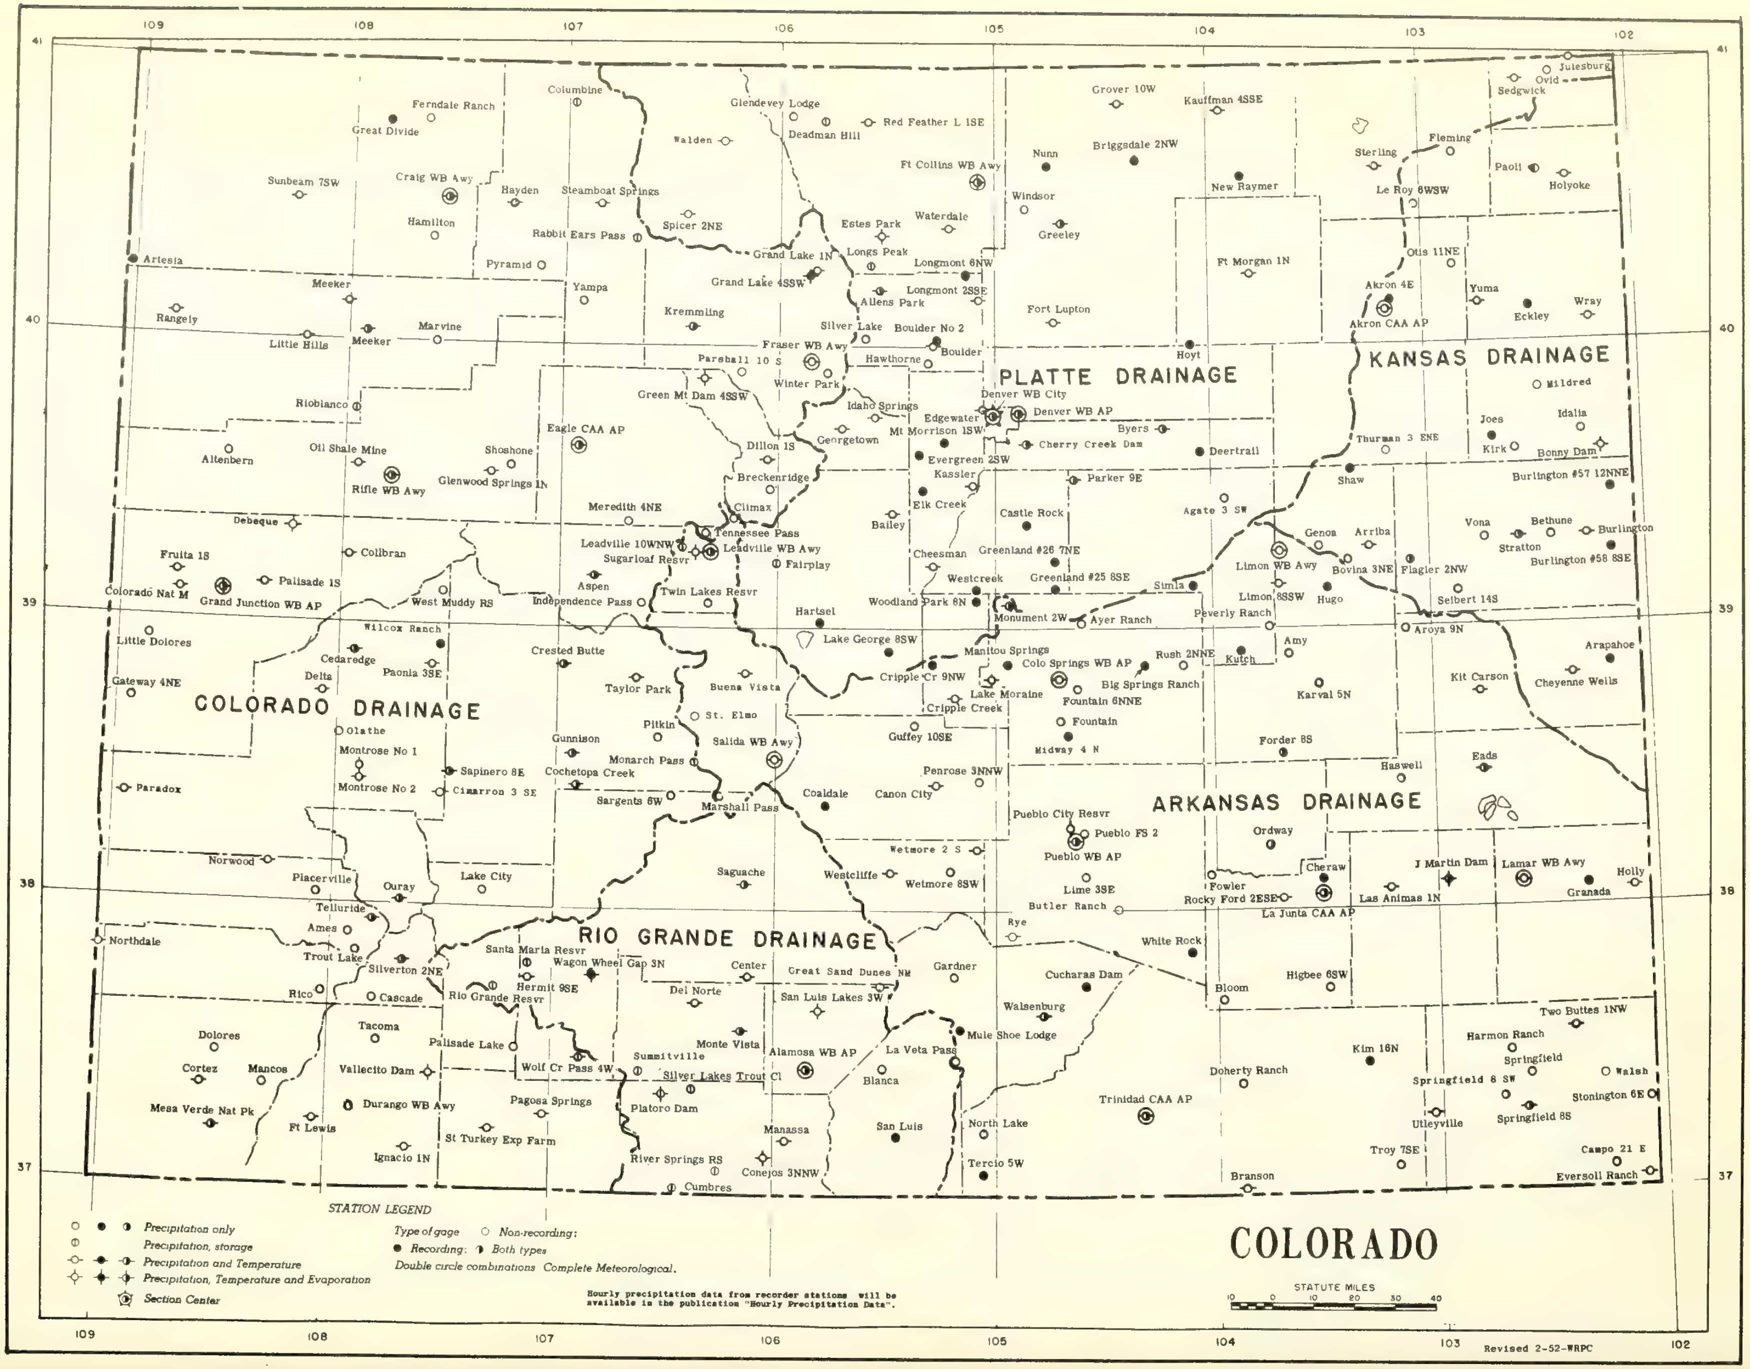
Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

GPO 86-102105 1100 4-1-53



Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

MARCH 1953
Volume LVIII No. 3

SAN FRANCISCO: 1953

COLORADO - MARCH 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The weather was comparatively mild for March with both temperature and sunshine considerably above seasonal. Precipitation was deficient throughout the State, and no severe or damaging storms occurred during the month.

The month opened cold and stormy until the 5th with general well-distributed snows, and the monthly minimum at most stations occurring on the 4th. From the 5th to the 12th, temperatures ranged somewhat above seasonal with some widely scattered showers and snow flurries in the Arkansas and Colorado River Basins. Near mid-month, temperatures dropped to near or slightly below the average with general precipitation, mostly over the western and southeastern sections. Temperatures fluctuated considerably from the 16th to the 23rd with moderate precipitation in the Colorado and Arkansas River Basins and light widely scattered moisture elsewhere. During the next 5 days, clear skies and the greatest daily temperature excesses occurred with the monthly maxima generally recorded on the 27th or 28th. The month closed cool and stormy with the heaviest precipitation in many sections occurring during this period.

The monthly mean temperature, 38.1°, was 3.7° above the 66-year average with all sections showing excesses. The highest mean was 50.7° at Holly, with the Taylor Park station in Gunnison County showing the low of 19.7°. The monthly maximum temperature, 87°, occurred at Eversoll Ranch, Baca County, on the 28th, and the minimum, a -28°, at Taylor Park on the 4th. The weighted precipitation average for the State was 1.09 inches, or 0.27 inch below normal, with all sections showing deficiencies. The greatest monthly amount, 4.99 inches, occurred at Wolf Creek Pass 4 W, and the least, a trace, at Wray. The maximum 24-hour precipitation, 1.81 inches, was recorded at Fowler on the 31st.

At the close of the month, preparation of the soil and planting of some crops was underway. Winter grains were poor to fair in the southern sections, while generally very good in the northern counties. Pastures and ranges showed little improvement and continued dry and inadequate. Livestock wintered well and only light losses and shrinkage resulted from adverse weather conditions. Spring calving and lambing were general with good increases reported.

Except for short periods in the extreme higher elevations, transportation was uninterrupted throughout the month.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

APRIL 1953
Volume LVIII No. 4

SAN FRANCISCO: 1953

COLORADO - APRIL 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

More than the average number of cloudy days, subnormal temperatures, and irregularly distributed moisture, with no severe storms, featured the month's weather.

April opened slightly warmer than normal, with moderate temperature fluctuations and widely scattered light precipitation until the 8th. From the 8th through the 19th, partly cloudy skies and pronounced temperature deficiencies prevailed, with some heavier moisture. During this period, frosts and freezing temperature were common and the monthly minima occurred in all sections, and the heaviest precipitation was recorded on the 21st. Temperatures rose rapidly and remained above seasonal most of the period through the 27th. Moderate precipitation occurred over most areas on the 23rd, and at scattered points in the Arkansas, Colorado, and Kansas River Basins on the 24th. Monthly maxima were most common in Section 5 on the 21st, Section 2 on the 22nd, and elsewhere on the 27th. The month closed unsettled and cool with light scattered precipitation.

The monthly mean temperature, 41.0°, was 2.9° below normal, with deficiencies in all sections. The highest mean, 52.9°, occurred at Holly, and the low, 22.1°, at Climax 2 NW. The monthly maximum, 94°, was recorded at Eversoll Ranch, Baca County, on the 27th, and the minimum, -24°, at Taylor Park, Gunnison County, on the 12th. Precipitation was slightly below seasonal with a weighted average of 1.68 inches, or 0.05 inch below normal. The Kansas and Colorado River Basins showed excesses, while deficiencies prevailed over the remainder of the State. Wolf Creek Pass 4 W recorded the greatest monthly amount, 6.01 inches, and San Luis Lakes the least, 0.27 inch. The greatest 24-hour amount, 2.00 inches, occurred at Wray on the 24th.

Soil preparation and planting of early grains, garden truck, and row crops got underway at the beginning of the month, and at its close, many fields were showing well. Due to previous dry periods and low temperatures, most vegetation was retarded from two to three weeks, and replanting was necessary in some localities. Winter grains continued very good in the northern areas, but poor to fair elsewhere, with many fields abandoned or reseeded. Alfalfa and other hay crops made fair progress. Cattle and sheep continued in very good condition with heavy marketing and some movement to summer ranges. Calving and lambing was general with good increases. Sheep shearing was in progress in some localities. Fruits, especially apricots and peaches, suffered from frost and low temperatures, but the extent of damage could not be determined at the close of the month.

Precipitation in the mountains increased the snow cover and somewhat improved the irrigation and storage water supply outlook.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

MAY 1953
Volume LVIII No. 5

SAN FRANCISCO: 1953

COLORADO - MAY 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

May was comparatively cool and slightly wetter than normal for the State as a whole. All sections showed temperature deficiencies. Precipitation was above seasonal in the Arkansas, Colorado, and Rio Grande River Basins, while minus departures occurred elsewhere, with a deficiency of over 50% in the Kansas River Basin.

The month opened cloudy and cool with light scattered precipitation until the 5th. From the 6th to the 9th, temperatures rose above seasonal with clear to partly cloudy skies prevailing. During mid-month, it was cool and general showers and thunderstorms were well distributed throughout the Section, with the monthly minimum temperatures and the heaviest precipitation occurring during this period. During the third decade, temperatures fluctuated somewhat, with the monthly maxima generally reported from the 24th to the 26th. At the close of the month, precipitation was widely scattered with the greatest concentration on the 28th.

The monthly mean temperature, 49.9°, was 2.7° below normal, with departures more or less uniform throughout the State. The monthly maximum temperature, 103°, occurred at Eversoll Ranch, Baca County, on the 26th, and the State minimum, a minus 1°, at Crested Butte on the 2nd. Precipitation averaged 1.77 inches, or 0.02 inch above normal. Trinidad CAA AP, with 4.20 inches, reported the greatest monthly amount, while the least, 0.22 inch, occurred at Mesa Verde National Park.

Due to subnormal temperatures during April and the greater portion of May, crops were retarded from ten days to two weeks by the close of the month. Deficient moisture early in the month delayed seed germination and plant growth. General precipitation during mid-month and higher temperatures at its close, benefitted most vegetation. Frost and low night temperatures caused some damage to fruit, alfalfa, and tender vegetation. Apricot and cherry losses were greatest with lesser damage to peach, pears, and apples. Winter grains were in good condition in the areas of greater precipitation and irrigated sections, while poor to fair in the southern dry farming counties. Spring grains, row crops, and garden truck made fair to good progress with some replanting necessary due to dryness. Pastures and ranges improved and were nearing seasonal condition as the month closed. Cattle and sheep, mostly on summer ranges, were in good to excellent condition with good increases and wool yield.

SEVERE STORMS

On the 16th, moderate to heavy hail, accompanied by strong winds, fell over an area of approximately 170 square miles south of Holly. Hailstones ranged in size from peas to marbles and the damage of around $10,000 was mostly to growing crops. Over scattered areas in metropolitan Denver and surrounding areas, severe hail, heavy rain, and strong winds prevailed during mid-afternoon on the 27th. Hailstones ranging in size up to two inches in diameter damaged airplanes at the Buckley Naval Air Station, also windows, greenhouses, flowers, and crops in several sections to the extent of over $120,000. Hail and thunder, accompanied by heavy rains, occurred in the Denver area between 3:00 p.m. and 3:15 p.m. on the 28th, notedly in the southeast section and in Aurora and Englewood. Transportation was slowed temporarily, streets flooded in the lower sections, but little damage resulted therefrom. Between 5:00 p.m. and 7:00 p.m. of the 28th, a moderate to heavy hailstorm damaged crops and property to the extent of $51,000 in the Haswell section. A moderate hailstorm over a limited area near Sugar City between 4:00 p.m. and 4:30 p.m., caused some losses to sugar beet and small grain crops. Near Forder on the 29th, strong southwesterly winds caused some blowing soil and limited damage to farm buildings.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHATTANOOGA: 1953

COLORADO - JUNE 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was the fourth warmest June of record, with a weighted mean temperature of 65.4°, or 3.9° above normal. The highest reading, 113°, exceeded the all-time extreme of 112° recorded in 1889, 1936, and 1952. Precipitation was comparatively light, averaging about 65 per cent of the normal, with all sections except the Rio Grande River Valley showing deficiencies.

Excess temperature departures prevailed during most of the month with the greater plus departures within the second decade and at the close of the month, during which periods the highest temperatures were observed at most stations. The cooler portion of the month was from the 3rd to the 8th, with the monthly minima most frequent on the 3rd. Precipitation was well-distributed throughout the period with more general rains from the 4th to the 7th, and during the second decade.

The monthly mean temperature, 65.4°, was 3.9° above normal. The monthly maximum of 113° occurred at Eversoll Ranch on the 24th, and the State minimum, 16°, at Fraser on the 3rd. Precipitation averaged 0.94 inch, or 0.51 inch below normal. Grover 10 W, with 4.11 inches, recorded the greatest monthly amount, while the least, 0.06, occurred at Gardner. The greatest amount in 24 hours was 1.84 inches at Fort Collins on the 7th.

Conditions were only fair for farming activities. Vegetation dried and burned from the comparatively high temperatures and deficient moisture. By the close of the month, many crops, ranges, and pastures had suffered severely from the elements, especially in the dry farming sections of the Arkansas River Valley. Crops generally were good in the higher elevations and irrigated sections, but poor to fair elsewhere. Winter grains ripened rapidly at the close of the period and harvesting was well underway. Thinning of sugar beets was completed and cultivating and irrigation were general. Cutting of a fair to good first crop of alfalfa was completed by mid-month. The second crop, however, was slow due to dryness. Livestock suffered somewhat in the drier areas, but generally was in very good condition.

SEVERE STORMS

Near Grover on the 1st, a moderate hailstorm caused $8,000 damage to crops over a large, sparsely settled section. On the 5th, a violent electrical storm, accompanied by hail and rain, extended from Denver southward for a distance of 35 miles, causing power failures, starting several fires, damaging roofs, greenhouses, crops, cars, and wooden buildings, to the extent of $25,000. Basements were flooded in some sections of Denver, and a number of fireballs caused considerable confusion and fright. At Las Animas on the 5th, a fire set by lightning damaged a large building to the extent of $25,000. Moderate twisters at Julesburg on the 7th, and at Antonite on the 17th resulted in slight damage to roofs and small buildings. Lightning damaged power lines, caused several fires, and two deaths in Denver on the afternoon of the 16th. Heavy hail at Sterling on the 19th, and at Sedgwick on the 30th, resulted in heavy crop losses. On the 21st, moderate hail caused limited crop damage near Holly, and some losses to greenhouses, roofs, and flowers at Englewood on the 27th.

‡ - 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

JANUARY 1952	CRAIG:	Precipitation departure should be .67.
FEBRUARY 1952	DENVER WB AP:	Precipitation departure should be .21.
APRIL 1952	COLLBRAN:	Precipitation departure should be -.99.
SEPTEMBER 1952	DURANGO:	Temperature departure should be 1.7° and precipitation departure -.35.
NOVEMBER 1952	SILVERTON 2 NE:	Precipitation departure should be .77.
ANNUAL 1952	BLANCA:	October precipitation, monthly total should be .27, departure -.49, annual precipitation total 7.77 and departure -2.20.
FEBRUARY 1953	KREMMLING:	Precipitation on 6th should be .00, monthly total .04, greatest day .02 on 16th, total snowfall 4.0 and days with .01 or more 2.

COLORADO

JULY 1953
Volume LVIII No. 7

CHATTANOOGA: 1953

COLORADO - JULY 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Somewhat abnormal temperature and precipitation, with more than the usual number of heavy downpours, moderate cyclonic wind movement, and hailstorms, featured the month's weather.

July opened warm and comparatively dry with only widely scattered showers and thunderstorms until the 8th, and the highest temperatures of the month occurring during this period. Precipitation was more general at the close of the first and beginning of the second decades, with heavy downpours at many stations. General rains were also quite frequent from the 15th to the 19th, and again at the close of the month. Temperature fluctuations were moderate throughout the period with the greatest minus departures near mid-month, and the greatest plus departures during the first decade.

The monthly mean temperature, 69.5°, was 2.1° above the normal. All sections showed excesses. The highest temperature, 110°, occurred at Eversoll Ranch on the 1st, Holly on the 5th, and at John Martin Dam on the 8th. The monthly minimum, 27°, was observed at Fraser on the 2nd and 3rd. Precipitation averaged 2.31 inches, or 0.29 inch above the weighted mean, and was abnormal in all sections except the Kansas River Basin. The greatest monthly value, 5.81 inches, occurred at Springfield 8 S, and the least, 0.18 inch, at Haswell. The greatest precipitation in any 24-hour period was 3.20 inches at the Doherty Ranch station on the 11th.

Conditions were only fair to good for farming activities. Crops generally were late and subnormal due to current and previous periods of deficient moisture and other unfavorable weather conditions. Harvesting of winter grains got under way with a considerably low average yield. Spring grains were ripening and combining of the more advanced fields had begun at the close of the month. Row crops made fair progress in the dry farming areas, and advanced satisfactorily in the irrigated sections, with the sugar beet and corn crops the most outstanding. Alfalfa, other feed crops, pastures, and ranges made only fair showing. Livestock continued in good to excellent condition, with evacuation of some herds from the southeastern drouth area. Picking of a light early fruit crop was under way at the close of the month.

SEVERE STORMS

On the 2nd, a moderate tornado or twister, accompanied by hail and rain, occurred over the Palmer Lake-Monument area. Hailstones ranged to the size of hen's eggs and accumulated to a depth of two to four inches. The storm severely damaged roofs, automobiles, and windows. Reports of crop losses were comparatively light. A wind and hailstorm crossed Logan, Phillips, and Sedgwick Counties on the evening of the 2nd. A funnel shaped cloud was observed during the disturbance and touched the ground at a point northwest of Holyoke, but little damage resulted. Crop losses from hail were heavy. At Pueblo on the 7th, high winds, accompanied by heavy rain, damaged buildings, fences, and signs. The downpour flooded basements, yards, and taxed drainage facilities. Total losses exceeded $25,000. An unusually heavy downpour of from one to four inches on the 9th in the metropolitan Denver area, flooded streets, ripped up pavements, snarled traffic and telephone lines. Some sections were inundated by two to three feet of water. The accompanying wind ripped branches from and uprooted trees. The total damage exceeded two-million dollars. Over the Timpas-La Junta area on the 11th, heavy rain resulted in flood water that overflowed and damaged highways and rainroad tracks. A racing farm suffered $32,000 damage, and 13 valuable dogs were drowned. Other property losses exceeded $50,000. On the 19th over an area of approximately four square miles east of Pueblo, a heavy hailstorm caused crop and property damage in the amount of $60,000. On the 27th, a telephone lineman was killed by lightning in Boulder Canyon. Hailstones ranged from 1/4 to 1/2 inch, and accumulated on the ground to a depth of one inch, causing $10,000 damage to crops in the Center area on the 28th. Heavy rains and hail on the 29th over the Palmer Lake to Peterson Field area stalled traffic temporarily, and caused moderate damage to railroads, highways, and other property.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables,are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHATTANOOGA: 1953

COLORADO - AUGUST 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Seasonal temperatures, near normal sunshine, precipitation somewhat above average and occasional heavy downpours featured the month's weather.

August opened unsettled and comparatively cool with general precipitation in most sections until the 5th, when skies cleared and temperatures rose to near seasonal at the close of the first decade, with general showers and thunderstorms from the 8th to the 11th. During mid-month temperatures fluctuated somewhat with a trend to cooler weather accompanied by general rains from the 16th to the 23rd. The month closed warm and dry in the east and south central portions while subnormal temperatures and moderate precipitation prevailed west of the Continental Divide.

The weighted monthly mean temperature, 65.9° was exactly normal. All sections, except the Arkansas River Basin with a moderate excess, showed minus departures. The highest temperature, 104°, occurred at Holly on the 29th, and the lowest 23° at Fraser on the 13th. Precipitation for the State as a whole averaged 2.02 inches, or 0.12 inch above the weighted mean and was above seasonal in all sections except the Platte and Rio Grande River Basins. The Rio Grande River Basin was the driest with a deficiency of over 50 percent. The greatest monthly value, 6.50 inches, occurred at Holyoke, and the least, 0.05 inch, at Conejos 3 NNW. The greatest precipitation in any 24-hour period was 2.70 inches, at Las Animas 1 N on the 17th.

Crops, ranges, pastures and vegetation in general benefited from the increased moisture and made the best showing of the season. Combining and threshing of winter wheat and barley were completed early in the month and harvesting of spring grains was well advanced at its close. Row crops and garden truck made fair to good showing and movement to market was general. Reports on corn were good and the sugar beet crop outlook the best for several seasons. Pastures and ranges improved somewhat, especially in the drouth area of the southeast portion. Cattle, sheep and other livestock continued in good to excellent condition in most sections with some herds showing slight shrinkage in the drier areas where feeding was necessary. The berry, cherry, apricot and other small fruit crops were light with a similar outlook for peaches. The apple and pear yield should be fair to good.

SEVERE STORMS

On the afternoon of the first a heavy downpour in Grand Junction flooded streets and basements, and damaged pavements and yards to considerable extent. In Salida heavy rains washed out railroad grades, flooded some streets and slowed transportation on the 4th. The accompanying electric storm damaged two buildings. On the 8th lightning-caused fires destroyed two buildings and contents in Canon City, and two persons were injured by lightning at the nearby Royal Gorge gate. Hail losses, to the extent of $25,000, resulted from a storm on the 8th near Kit Carson. A moderate hailstorm on the 10th, centered on Orchard Mesa near Grand Junction, damaged peaches and other crops to the extent of $15,000. In Colorado Springs on the 15th heavy rains flooded streets, basements and lawns and the accompanying lightning damaged transmission lines. One to three inches of rain and hail, accompanied by strong winds, near Fowler on the 16th disrupted telephone and electric services, flooded streets and basements, and a nearby twister damaged a barn and several power poles, with the total losses exceeding $90,000. Floods resulting from a heavy downpour on the 15th and 16th near Pueblo caused $100,000 to roads and bridges. On the 17th a tornado moved north and west of Bennett. The storm cloud, nearly a perfect cylinder, extended 1000 feet into the air with a forward movement of about eight miles per hour. It was followed by heavy rain and a little hail. The storm path, mostly in an uninhabited area, caused little damage. At Franktown on the 17th a tornado of very short duration caused $20,000 damage to a residence and shops of the Walker Contruction Company. Crop losses of $20,000 were caused by hail over an area extending from one-half mile south of Sterling to Atwood on the 19th. Some growing crops near Rye were slightly damaged by moderate hail on the 19th.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHATTANOOGA: 1953

COLORADO - SEPTEMBER 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Clear to partly cloudy skies, low humidity, abnormal sunshine and temperature, and the least precipitation of record, characterized the month's weather.

September opened warm and dry with temperatures 5 to 10° above seasonal and the monthly maxima occurring at most stations in the Arkansas, Platte, and Rio Grande River Basins on the 1st. Subnormal temperatures prevailed from the 2nd until the 6th, with only very light, widely scattered moisture. It was warmer than usual from the 7th through most of the second decade, with monthly maxima in the Colorado and Kansas River Basins, and the greatest number of days with precipitation for the State as a whole. The period from the 19th to the 31st was moderate and entirely without moisture from the 19th to the 26th, with monthly minima mostly occurring on the 21st and 25th.

The average monthly temperature, 60.7°, was 2.3° above normal, and all sections showed excesses. The highest station mean, 71.7°, occurred at Palisade 1 S, and the lowest, 44.9°, at Climax 2 NW. Eversoll Ranch, in Baca County, reported the monthly high of 101° on the 16th, while a low of 8° occurred at Fraser on the 25th. Precipitation averaged 0.14 inch, a deficiency of 1.25 inches, and was subnormal in all sections of the State, and the least for any September during the entire period of record. Ames recorded 1.85 inches, the greatest monthly amount, and no moisture occurred at 37 stations. The greatest 24-hour amount of precipitation was 1.40 inches at Cimarron 3 SE on the 12th.

The mild, dry weather was favorable for harvesting, but crops, ranges and pastures suffered from lack of moisture in practically all sections. Soil preparation and planting of fall grains got underway with some fields showing well. In many areas, however, seed failed to germinate due to dryness. The sugar beet crop, which is mostly limited to the irrigated sections, was most promising. Cattle, sheep, and other livestock generally were in very good condition with considerable movement to winter ranges, feed lots, and market. Picking of an excellent but light peach crop was completed early in the month, while the harvest of a near-normal pear and apple yield continued through the period.

SEVERE STORMS

In the southwest portion of the city of Boulder, a tornado-type wind of limited intensity damaged two residences to the extent of $3,000, on the afternoon of the 17th.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHATTANOOGA: 1953

COLORADO - OCTOBER 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Normal precipitation and slightly above seasonal temperatures with some wind disturbances featured the month's weather.

October opened warm and dry with the monthly maximum temperatures occurring on the first and second at most stations. A noticeable drop in temperature occurred on the 3rd and a deficiency prevailed until the 6th, when plus departures again predominated until the close of the second decade. It was much cooler again from the 21st to the 26th, with the monthly minima most frequent on the latter date. The month closed clear and comparatively warm. Light, widely scattered showers and snow flurries occurred in the Colorado and Kansas Drainage Basins early in the month with general precipitation from the 11th to the 16th and 19th to 25th, with the greater amounts recorded in the latter period.

The monthly mean temperature, 49.4°, was 1.9° above seasonal with all but the Rio Grande Drainage Basin showing excesses. The highest monthly mean, 59.6°, was at the Eversoll Ranch station in Baca County, and the lowest, 34.4°, at Climax 2 NW. The maximum temperature, 95°, was observed on the 2nd at Sedgwick, and a minimum of zero was recorded at Platoro Dam on the 25th. Precipitation averaged 1.23 inches, exactly normal, with the Kansas and Platte Drainage Basins showing deficiencies and the remainder of the State excesses. The greatest monthly amount at any station, 4.82 inches, occurred at Ames. Greeley was the driest in the State with only 0.08 inch. The greatest 24-hour value, 2.40 inches, occurred at Rico on the 23rd.

Conditions generally were favorable for farming activities, but soils were too dry in many sections for plowing. Most crops were harvested by the end of the month without losses due to weather conditions with digging of sugar beets and picking of corn and apples continuing. Winter grains, ranges and pastures recovered somewhat from previous dry periods but were only in good to fair condition, especially in the southern counties. Cattle, sheep, and other livestock continued in good to excellent condition with heavy movement to winter ranges, feed lots, and market.

SEVERE STORMS

Near Fowler on the 20th, a whirlwind-type tornado caused $15,000 damage to buildings, trees, and transmission lines. Immediately following the Fowler disturbance, a moderate tornado, accompanied by rain and hail, uprooted trees, damaged buildings and other property to the extent of $4,000 over a limited area 20 miles north of Ordway. The hailstones ranged in size from peas to pigeon eggs and completely covered the ground.

WMW

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

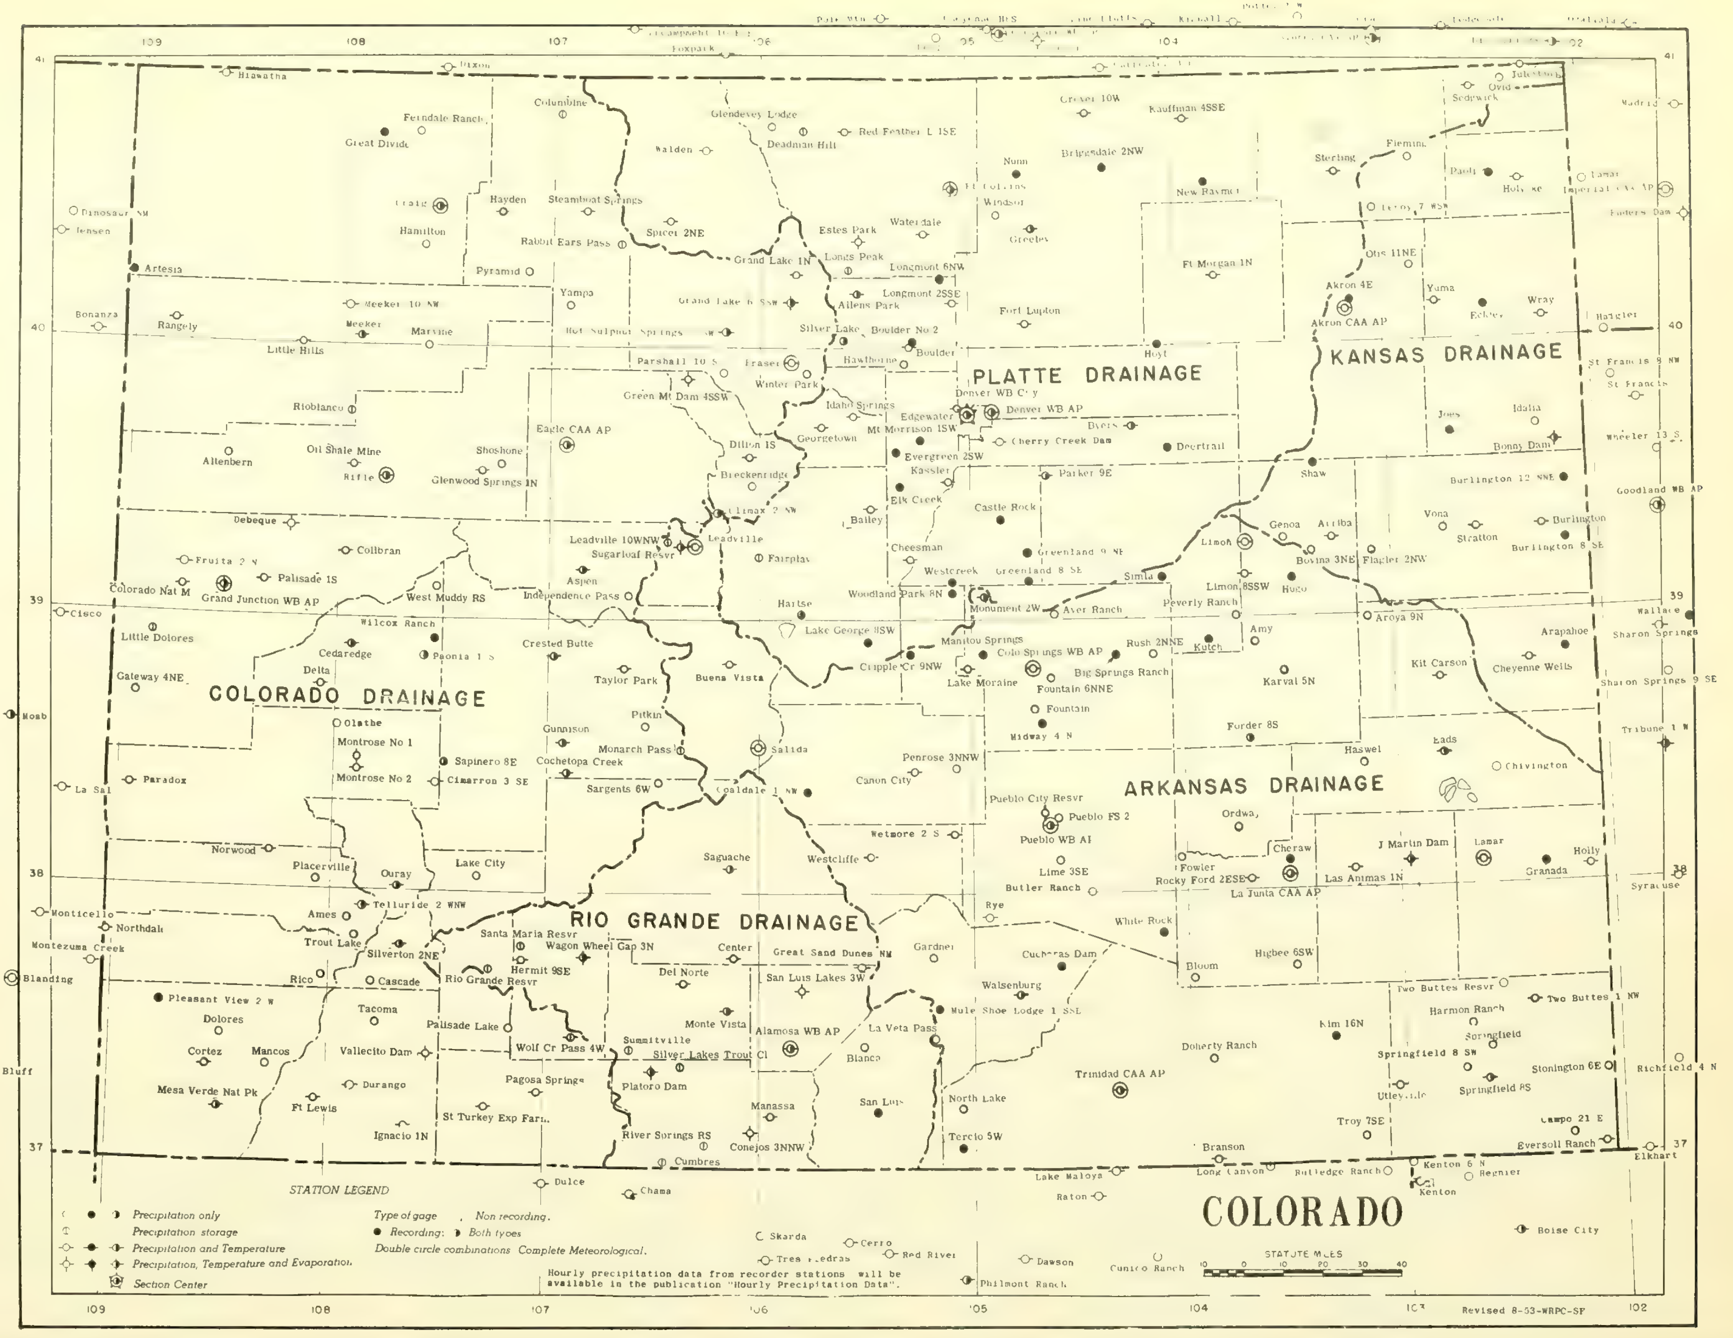
Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C. Chattanooga--12-3-53--1100--



Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

NOVEMBER 1953
Volume LVIII No. 11

CHATTANOOGA: 1954

COLORADO - NOVEMBER 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Somewhat abnormal temperatures and precipitation, near seasonal sunshine and humidity, and occasional strong gusty winds featured the month's weather.

November opened warm and dry with the monthly maxima at many stations occurring on the 1st and 2nd. From the 3rd to the 8th east of the Continental Divide, and from the 7th to the 10th over the western slope, temperatures dropped and light precipitation was general over most of the State, with strong winds on the 5th. During mid-month, clear skies prevailed with some stations reporting the monthly maximum during this period. Most severe conditions with the greatest precipitation and lowest temperatures prevailed from the 18th to the 22nd, with monthly minima most prevalent on the 20th and 22nd. Strong winds were common over an area immediately east of the Continental Divide from the 22nd to the 24th. The month closed clear and warm with plus temperature departures over the entire State.

The weighted monthly mean temperature, 37.9°, was 3.0° above the normal with all sections showing excesses. The highest monthly mean, 46.3°, occurred at Boulder and Kassler, and the lowest, 24.4°, at Climax 2 NW. The highest temperature, 82°, was recorded at Utleyville on the 28th, and the lowest, -19°, at Monte Vista on the 20th. The weighted average precipitation, 1.12 inches, exceeded the normal by 0.29 inch, with all sections except the Rio Grande Drainage Basin showing excess departures. The greatest monthly amount, 4.60 inches, occurred at Wolf Creek Pass 4 W, and the least, 0.20 inch, at Parker 9 E. The maximum amount in any 24-hour period was 1.84 inches at Cascade on the 18th. Average snowfall for the month was 8.0 inches.

Soil preparation was limited because of previous dryness. Some winter grains failed to germinate in the drier sections and the crop outlook was only fair to good. Harvesting of an unusually good sugar beet crop was nearing completion at the close of the month. Cattle, sheep and other livestock were in very good condition with most herds in feed lots, as most winter ranges and pastures were generally dry and inadequate.

SEVERE STORMS

On the 5th over Elbert, El Paso, and Lincoln Counties, strong winds, accompanied by a glaze storm, damaged telephone and other transmission lines to the extent of $50,000. From the 22nd to the 24th, strong winds, reaching gust velocities of 80 to 90 miles per hour, over an area extending from Boulder to Colorado Springs, caused $60,000 losses to buildings, trees, TV antennae and towers.

WMW

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

DECEMBER 1953
Volume LVIII No. 12

CHATTANOOGA: 1954

COLORADO - DECEMBER 1953

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was slightly cooler than the average December, with about 75 percent of the normal precipitation. Snow cover in the higher elevations at the close of the month was light and the irrigation and storage water supply outlook was only fair. Except for strong winds over the north central section on the 6th, no severe or damaging storms occurred.

The 1st was warm and clear with the monthly maxima occurring at many stations on this date. Conditions changed rapidly with moderate temperature fluctuations and general precipitation from the 2nd until the close of the first decade. Clear to partly cloudy skies prevailed during mid-month with gradually rising temperatures until the 20th, followed by a noticeable trend to lower temperatures and light precipitation until near the close of the month when skies again cleared and temperatures rose to near seasonal. The monthly minima generally occurred near the close of the first decade and during the first of the third.

The weighted monthly mean temperature, 25.0°, was 1.0° below normal, with all sections except the Platte Drainage Basin showing deficiencies. The highest monthly mean, 37.7°, was at Canon City, and the lowest, 12.0°, at Climax 2 NW. The extreme maximum, 68°, occurred at Eversoll Ranch, Baca County, on the 1st, and the extreme minimum, -30°, at Taylor Park on the 23rd. Precipitation averaged 0.70 inch, or 0.24 inch below normal, with the Arkansas, Kansas, and Platte Drainage Basins showing slight excesses and the remainder of the State more pronounced departures. The greatest monthly amount at any station, 2.58 inches, occurred at La Veta Pass. Cheyenne Wells and Hermit 9 NE, the driest points in the State, reported traces. The greatest precipitation in any 24-hour period was 2.10 inches at La Veta Pass on the 22nd.

Winter grains were mostly fair to good. Pastures and ranges continued dry and inadequate. Cattle, sheep, and other livestock were in very good condition. Hay was plentiful and heavy feeding was necessary in most sections. Highways remained open and in good condition practically all month.

SEVERE STORMS

In the north central portion of the State on the 6th, strong winds reaching gale force at some localities, damaged windows, buildings, and transmission lines. The TV tower on Lookout Mountain was a total loss when blown to the ground.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
AR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

MAY 1953	ARRIBA:	Min. temperature on 16th should be 45°, mean min. 34.5°, mean 50.0°, departure -5.2°, days with 32° or below 11 and total degree days 465.
AUGUST 1953	GRAND LAKE 6 SSW:	Min. temperature on 6th should be 39°, mean min. 41.8°, mean 56.1°, departure -0.2° and total degree days 265.

ANNUAL SUMMARY 1953
Volume LVIII No. 13

CHATTANOOGA: 1954

COLORADO - ANNUAL - 1953

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

The year was somewhat warmer than usual with a mean temperature of 46.9°, or 1.6° above normal. Deficiencies occurred in April, May, and December. Except for August, which was exactly normal, excesses obtained during the remaining months with the outstanding plus departure of 8.4° in January, the warmest for the entire period of record. Precipitation was considerably below normal for the year with deficiencies in January through April, June, September, and December. Moisture in October was exactly normal; slight excesses occurred in May, July, August, and November. The total annual precipitation, 14.15 inches, was 2.39 inches below normal. The greatest monthly amount was 6.50 inches at Holyoke during August. Snowfall totaled 59.2 inches, about 20% below normal. Maximum temperatures of 100° or above were recorded during May, June, July, August, and September, with the annual high of 113° at Eversoll Ranch on June 24. Sub-zero temperatures occurred January through May, and in November and December, with an annual low of -43° at Taylor Park on February 21. The precipitation deficiency and outstanding January temperature excess were the main climatic features of 1953.

SYNOPSIS BY MONTHS

JANUARY: The month was unusually warm with record-breaking temperatures, a precipitation deficiency of 31%, and wind movement considerably above seasonal, but without severe or damaging storms. The weighted monthly mean temperature, 31.7°, was a record high for the entire period of observations. Precipitation was comparatively light but well-distributed throughout the State, with the greater amounts occurring at the opening of the period and again near mid-month. Winter grains suffered from moisture deficiency and soil erosion. Pastures and ranges remained dry, but hay and feed were plentiful. Livestock was in very good condition with heavy movement to market. Subsoil moisture and snow cover were both deficient at the close of the month.

FEBRUARY: Noticeably dry and windy conditions prevailed with slightly above normal temperatures in most sections. The most outstanding features of the month were blizzard conditions on the 9th, 19th, and 20th, being most severe over the northeast portion. Wind drifted snows stalled transportation; reduced visibility; damaged transmission lines, buildings, and trees; and resulted in noticeable shrinkage and some losses to livestock. Winter grains continued to suffer from dryness and blowing soil, especially in east-central and southeast portions. The lowest temperature of the year, -43°, occurred on the 21st at Taylor Park.

MARCH: Abnormal temperatures and sunshine, deficient moisture, and no severe storms featured the month's weather. Little improvement was noted to winter grains and ranges. Preparation of soil and planting of some crops got underway. Livestock wintered well and only slight losses and shrinkage resulted from weather conditions. Spring calving and lambing were general with good increases. Transportation was uninterrupted throughout the month except for short periods in the extreme higher elevations.

APRIL: More than the average number of cloudy days, subnormal temperatures with frost in most sections, irregularly distributed but near seasonal precipitation, and no severe storms featured April's weather. Farming activities were near seasonal at the close of the month and many fields were showing well although somewhat retarded by previous low temperatures and deficient precipitation. Winter grains, ranges, and pastures improved in the northern sections but remained only poor to fair in the southern counties. Livestock remained in very good condition with calving and lambing general. Fruits, especially peaches and apricots, suffered from frost and low temperatures. Snow cover in the mountains increased, somewhat improving the irrigation and storage water supply outlook.

MAY: May was comparatively cool and slightly wetter than normal for the State as a whole, with the Kansas Drainage Basin showing a precipitation deficiency of over 50%. Subnormal temperatures retarded plant growth and deficient moisture delayed seed germination. Frost and low temperatures damaged some fruits, alfalfa, and other tender vegetation. Grains and row crops were generally fair to good. Cattle and sheep, mostly on summer ranges, were in good to excellent condition with good increases and wool yield. On the 16th, near Holly, hail and strong winds caused $10,000 damage, mainly to crops. Over the metropolitan Denver and surrounding area on the 27th, hail, wind, and rain damaged airplanes, crops, and buildings to the extent of $120,000. Heavy rain on the 28th at Denver flooded streets and slowed transportation, but no heavy losses resulted. In the Karval section on the 28th, hail caused crop losses in the amount of $51,000.

JUNE: The month was the fourth warmest June of record, with a weighted mean temperature of 65.4°, or 3.9° above normal. The highest reading for the year, 113°, was recorded at Eversoll Ranch, Baca County, on the 24th, exceeding the all-time extreme of 112°, recorded in 1889, 1936, and 1952. Precipitation was comparatively light, averaging about 65% of the normal, with all sections except the Rio Grande Drainage Basin showing deficiencies. Several severe wind and hailstorms through the period caused considerable damage; the greatest losses from hail, rain, and wind were near Sedgwick on the 30th. Vegetation dried and burned from the high temperatures and deficient moisture, especially in the dry farming areas. Winter grains ripened early and at the close of the month harvesting was well advanced. Thinning of sugar beets was completed and cultivating and irrigation were general.

JULY: Somewhat abnormal temperatures and precipitation with more than the usual number of heavy downpours, moderate cyclonic wind movement, and hailstorms featured the month's weather. Crops generally were subnormal due to deficient moisture and unfavorable weather conditions. Harvesting of winter wheat and barley was well advanced and spring grains ripened rapidly. Row crops, alfalfa, ranges, and pastures made fair progress in the dry farming areas with some improvement showing in the irrigated sections. Livestock was generally in good condition, with evacuation of some herds from the southeastern drouth area. Severe and damaging storms were quite frequent and damage to crops and property exceeded $3,000,000. Moderate tornadoes occurred on the 21st, strong winds on the 7th, and hail on the 7th, 9th, 11th, and 29th. One person was killed by lightning on the 27th.

AUGUST: Seasonal temperatures prevailed throughout the month with near normal sunshine, precipitation somewhat above average, and occasional heavy downpours. Vegetation benefited from increased moisture and made the best showing of the season. The harvest of winter wheat and barley was completed and combining and threshing of spring grains was well advanced. Livestock continued in good to excellent condition with some shrinkage in the drier areas where feeding was necessary. Moderate tornadoes occurred on the 16th, 17th; heavy hail 8th, 10th, and 19th; and unusually heavy rainfall on the 1st, 4th, 15th, and 16th.

SEPTEMBER: Clear to partly cloudy skies, the least September precipitation of record, low humidity with abnormal sunshine and temperature, and no severe storms characterized the month's weather. Conditions were favorable for harvesting and general farming activities. All vegetation suffered from high temperatures and lack of moisture. Some seeding of fall grains got underway, but soil was too dry in most sections for best results. Cattle and sheep were in very good condition, with considerable movement to winter ranges, feed lots, and market. Picking of an excellent but light peach crop was completed early in the month.

OCTOBER: Conditions were near seasonal with exactly normal precipitation, slight temperature excesses and some wind disturbances. Farming activities progressed normally with most crops harvested by the end of the month without losses due to adverse weather conditions. Grains, ranges and pastures improved somewhat but were in only fair to good condition. Moderate tornadoes occurred near Fowler and Ordway on the 20th, damaging property to the extent of $20,000.

NOVEMBER: Temperatures and precipitation were somewhat abnormal with near seasonal sunshine and humidity and occasional strong gusty winds. Harvesting of an unusually good sugar beet crop neared completion at the end of the month. Soils were dry and some winter grains failed to germinate. Pastures and ranges were poor to good, hay was plentiful, and most livestock in good condition. Strong winds over Elbert, El Paso, and Lincoln Counties on the 5th, and over an area extending from Boulder to Colorado Springs from the 22nd to the 24th, caused losses exceeding $100,000 to trees, buildings and other structures.

DECEMBER: The month was slightly cooler than the average December with about 75% of the normal precipitation, and some unusual wind movement on the 6th. Winter grains showed slight improvement. Pastures and ranges remained dry and inadequate. Reports on livestock were very good with feeding general. Over north-central Colorado on the 6th, strong winds, reaching gale force in some localities, caused considerable damage in Denver and vicinity. Windows were broken and some buildings and transmission lines damaged. The 300-foot TV tower on Lookout Mountain was a total loss when blown to the ground.
